

Hey Mike,

I have made a copy of the weather map for the month of June (see below) and there are a lot of rain days in the forecast. Not many open days without rain or affected by the rain to choose from.

June 14th Friday ?? or June 19th Wednesday if we can wait?? Do we try to keep up with the grass or do we let it go and let it revert back to a derelict or abandoned field?

Pete M.

Looking at my back yard after last nights rain I believe it will be a while.  
Will put new battery on charge to make sure it's fully charged.  
I sent fuel additive info to Paul. He stated that if any debris hits fuel injection pump we're talking big money repair. So in his opinion the additives could be dangerous. After filter is changed we could start. Additives. I'm just relaying his response.

*Hey Mike,*

*Thanks for your effort and time in testing and getting an exchange/replacement battery.....When do you propose this grass cutting take place??*

Hey guys

I found that the new/old battery did NOT take a charge. So I got a new one. Let's try this again.

Mike
